To whom it concerns,

Hudson Valley Fish Farms acquired a two-in-one in-water, in-line stun / stun kill system in 2017. Originally, we planned to use the stun / kill system (with its 120m long convoluted pipeline) to harvest our steelhead at weights up to about 0.75kg. And we did this for a while. However, all our steelhead are now harvested at weights from 1-4kg and we now use the larger diameter 16m long pipeline stun system for these larger fish which are then manually bled before immersion in an ice slurry. Perfect carcass quality every time!

Take it from me, both systems have performed beyond my expectation. We have shown many other fish farmers around our state of the art RAS in Hudson. Like us, they agree that our fish harvest technology is in keeping with everything else throughout our RAS: modern, humane, efficient, the way to go!

Yours faithfully,
